A ROCKWELL AUTOMATION PARTNER

NETWORK AND SECURITY ASSESSMENT

YOU MAY BE WELL-NETWORKED, BUT DO YOU KNOW YOUR RISKS?

A Standard Network Assessment can help you evaluate the health and security of your company's industrial control system network.

ASK YOURSELF:

- Do you know what assets you have on your network?
- Have you considered how security risks can cause safety risks?
- Do you have a team that performs a complete security audit of your network infrastructure, more than just a network scan?
- Do you have a maintenance or service person who comes into your facility that can make configuration changes to a controller, and do you have policies around this type of access?

WE HAVE THE EXPERIENCE TO HELP

A Rockwell Automation Standard Network Assessment provides you with the following:

- Inventory of major network components including network switches, routers, and firewalls
- Baseline comparison of physical, logical, and security-based elements against industry standards
- Evaluation of key aspects of the network with minimal impact to your production environment
- Recommendations and remedies to current network infrastructure challenges
- Actionable next steps

BENEFITS

Experience security without sacrificing productivity

Reduce risks while improving Overall Equipment Effectiveness

Improve network scalability and reduce the level of network support needed

Reduce future industrial IT CAPEX

WHAT TO EXPECT

1. Kickoff meeting and site preparation

The process begins with a team meeting so that we can discuss your data requirements.

2. On-site data collection and interview

A Rockwell Automation Authorized Service Provider Network Engineer will conduct an on-site interview and physical plant walk-through. We'll gather physical infrastructure information during the site walk-through, and logical and security information during the on-site interview.

3. Off-site data processing

A Rockwell Automation Network Engineer will analyze the collected data and compile a final report. This report will provide an in-depth overview of network architecture along with recommended actions. Each section will be rated on criticality to the impact of your operations, so you know what will make the largest impact.

4. Delivery

The Rockwell Automation Authorized Service Provider will review the assessment, discuss remediation, and help you develop an action plan.
